1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. The drawings received on August 18, 2008, as replacement sheets are acceptable.
3. Applicant’s remarks, see pages 8-10, filed August 8, 2008, with respect to claims 1-9 have been fully considered and are persuasive. Examiner acknowledges applicant removing reference numerals from the new claims 10-19 and recognizes that the new claims 10-19 replace claims 1-9 which have been canceled. Accordingly, the rejection of claims 1-9 has been withdrawn.
4. The following is an examiner’s statement of reasons for allowance: In independent claim 10, applicant recites the structure of the vanes for the instant invention that clarify any ambiguities and deficiencies for the description of the structure of the vanes of the previously canceled claims. The recitation for the structure clearly states “. . . a plurality of curved, parallel vanes disposed between the top plate and the bottom plate and defining diffuser channels therebetween, each of said vanes having a thickness which increase continuously in the flow direction to a maximum, then continuously decreases resulting in a cross sectional area of the diffuser channels which expands evenly, said diffuser channels leading to an outlet in the flow direction” This limitation is also recited in independent claim 19 which includes the subcombination, the vane diffuser, in a separation apparatus.
5. The closest prior art references are Christiansen ‘437 (US 7,144,437), McEwan ‘424 (US 4,767,424), and GB ‘699 (GB 1,119,699). Christiansen ‘437 teaches a vane diffuser for an inlet device. McEwan ‘424 teaches an arrangement between upper and lower walls of guide vanes

Art Unit: 1797

disposed one behind the other in the direction of flow where the flow is evenly distributed over the cross section of the separation apparatus with the vane-type inlet device. GB '699 teaches an inlet and distribution device made of a number of curved guide vanes placed one behind the other where the leading end of each vane has a sharp angle with the direction of the main flow of the gas/liquid mixture entering a separation apparatus, such that each vane intercepts and deflects the feed stream and is capable of effecting a separation between liquid and vapor by inertia and centrifugal force; the plurality of vanes form a series where the vanes are placed at such a distance from each other that a substantially uniform distribution of liquid and vapor is obtained over a cross-section in which the series of vanes extends.

Each reference teaches a gas/liquid separator with a vane-type inlet device used in liquid/gas separation apparatus, and each of Christiansen '437, McEwan '4244, and GB '699 are silent regarding the physical characteristics of the vane dimensions, such as width, depth, or "thickness." The prior art of record does not teach or fairly suggest the structural limitations relating to dimensions for the vanes as recited in independent claims 10 and 19. Additionally, it would not have been obvious to one of ordinary skill in the art at the time of the present invention to provide such structure because none of the prior art references of record suggest such modification. Accordingly, independent claims 10 and 19 and dependent claims 11-18 linked to claim 10 are allowable.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure and is listed on PTO-892 (Notice of References Cited).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Art Unit: 1797

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
